Address: Jinnah Gardens Phase 1 Block C Street 40A, Islamabad, Pakistan (Home)

WORK EXPERIENCE

FULL STACK AI ENGINEER – WHOOPIT SMC PVT LTD | DIGITAL MARKETING SOLUTIONS – 01/06/2026 – Current – HARIPUR, PAKISTAN

Developed full-stack web applications using modern technologies.
Built AI automation workflows and integrated AI APIs into business applications.
Developed and maintained frontend, backend, and database components.
Automated business processes to improve efficiency and user experience.
Collaborated with the development team using Git and Agile practices.

IT ASSISTANT – BALI TECH PVT LTD – 01/03/2026 – 31/05/2026 – RAWALPINDI, PAKISTAN

Provided IT support in a fast-paced work environment, handling multiple user requests efficiently.
Diagnosed and resolved hardware, software, and network issues to minimize downtime.
Configured IP settings and troubleshooted connectivity problems to ensure stable operations.
Installed, maintained, and upgraded computer systems and IT equipment.
Delivered quick and effective technical support, improving overall system performance and user productivity.

ARTIFICIAL INTELLIGENCE INTERN – APEXCIFY TECHNOLOGYS – 01/03/2026 – 30/04/2026

Developed AI and machine learning projects using Python, Flask, and NLP.
Built an FAQ Chatbot using text similarity techniques for automated question answering.
Created a Rock-Paper-Scissors AI Game with a learning AI opponent and responsive web interface.
Worked on an Object Detection project using computer vision and machine learning techniques.
Gained hands-on experience in AI development, model implementation, and Git/GitHub.

PYTHON DEVELOPER (INTERNEE) – SMART TECH SOLUTIONS – 01/06/2024 – 31/08/2024 – ISLAMABAD, PAKISTAN

Developed a full-stack web application using the **Flask framework**, integrating both front-end and back-end components.
Designed RESTful APIs, managed database interactions using **SQLAlchemy**, and implemented user authentication and session management.
Collaborated with the development team to optimize code performance and ensure responsive design.
Gained hands-on experience in Python programming, web development, and version control with Git.

WORDPRESS DEVELOPER (INTERNEE) – GIGA DEVELOPERS – 01/06/2023 – 09/09/2023 – HARIPUR, PAKISTAN

Assisted in developing and customizing **WordPress websites** using themes and plugins based on client requirements.
Worked on both front-end design and back-end configuration to ensure responsive and user-friendly interfaces.
Participated in multiple live projects, contributing to website optimization, content integration, and bug fixing.
Gained practical experience in **HTML, CSS, WordPress CMS**, and basic SEO implementation.

EDUCATION AND TRAINING

01/08/2021 – 30/06/2025 Haripur, Pakistan
BACHELORS IN ARTIFICIAL INTELLIGENCE University Of Haripur

Website <https://www.uoh.edu.pk/> | **Field of study** Artificial Intelligence | **Final grade** 3.74 CGPA | **Level in EQF** EQF level 6 |

Thesis GastroCAD: An AI-Driven Real-Time CAD System for Detection, Analysis and Visualization of Stomach Cancer and Gastric Ailments

Website <https://thepeace.edu.pk/> | Level in EQF EQF level 4

01/02/2016 – 30/03/2018 Haripur, Pakistan
SSC Jinnah Jam e School And College Haripur

Field of study Science | Final grade 83% | Level in EQF EQF level 3

● **LANGUAGE SKILLS**

Mother tongue(s): **URDU**
Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C1	C1	B2	B2	C2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

● **SKILLS**

Python Developer | Project Management | WordPress Developer | Problem Solving | Team-work oriented |
Microsoft Office | Microsoft Word | Microsoft Excel | C++

● **PROJECTS**

GastroCAD: An AI-Driven Real-Time CAD System for Detection, Analysis and Visualization of Stomach Cancer and Gastric Ailments

Developed "GastroCAD" — a real-time AI-powered computer-aided diagnosis system designed to detect, analyze, and visualize stomach cancer and gastric disorders. The system utilizes transformer-based deep learning models and a user-friendly Flutter interface to assist clinicians with accurate, real-time analysis of endoscopic imagery. Integrated cloud infrastructure and real-time reporting ensure seamless use in clinical settings, enhancing early detection and treatment planning.

Railway Management System

Developed a **Railway Management System** in C++ using Object-Oriented Programming (OOP) principles as a second-semester team project. The system allowed users to manage train schedules, reservations, and passenger records through a console-based interface, demonstrating core concepts like classes, inheritance, file handling, and modular design.

Car Number Plate Detection, Face detection, etc

Designed and implemented multiple mini-projects in Python during the 6th semester, focusing on computer vision and machine learning. Projects included **Car Number Plate Detection, Face Detection, Bone Fracture Identification, Location Tracker**, and **Eye Detection** using libraries such as OpenCV and TensorFlow. These projects helped strengthen practical understanding of real-time image processing and AI model integration.

Home Automation System

Developed a **Home Automation System** using C++ as a semester project, integrating both software and hardware components. The system allowed users to control home appliances like lights and fans through **voice commands**. Built a functional physical prototype demonstrating real-time automation using smart home technology.

Automated Irrigation System Design Using Digital Logic Design (DLD)

Developed an automated irrigation control system as part of the Digital Logic Design course. The system optimizes water usage by controlling irrigation schedules based on sensor inputs and logical decision-making circuits. Utilized basic digital components and logic gates to design and simulate the irrigation automation, improving water efficiency and supporting sustainable agriculture practices.
